

## Features: **Bollard mount, dual frame system**

### Features:

-No assembly required, no cross-mount Bollard brackets in the rear to install, no parts to lose or misplace, simple installation. Packaged in one box, cheap to ship. Simply unfold frame and strap to bollards with 4 quick release straps, tighten with flat screwdriver. Won't wobble or tilt in high winds. Made in any size you want, any color.

-Both edges of the frame strap tightly to the Bollards. The really nice design feature is that the left and right sides of the frame cover most of the edge of the bollards for best, cleanest appearance. Mount at any desired height.

-Can easily adjust the angle of the frames as it projects from the bollards by how it straps to the bollards. Simple install.

-The V shape of design is great because the message is seen as drivers approach the pumps and then continued to be seen from the "side" as the customers are refueling -on both sides of the pumps. The flat mounted frames don't allow for this.

-The gap between both frames is for wind relief when fierce winds are blowing from behind the frames. The V shape front is a natural wind deflector.

-Our frame offers "double" the advertising exposure and an attractive appearance. Made in any size or color you want. Pictured above are frames to hold super common 24" 'x 36" posters.
