# How to install a Fabric graphic into a FlipUp™ frame
Perfectly stretches and holds fabric graphics

1. A high tack, removable, releasable, tape is pre-installed along all 4 sides of of the backer in the frame. Assuming the frame is hanging on your wall, first peel off ONLY the top masking of the tacky tape.

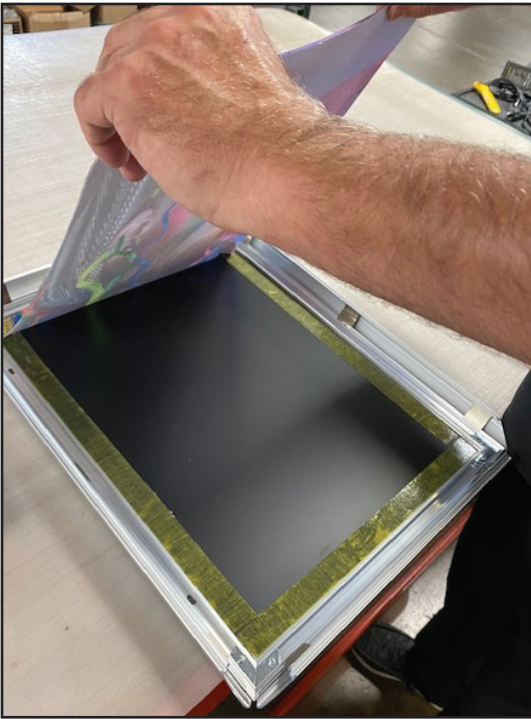

2. Gently stretching the Fabric at the top, tack Fabric onto tape. You can pull it off gently and re-position if you need to.

3. Making sure Fabric is not hanging down, remove the masking on the remaining 3 sides.

4. Carefully tack down the Fabric on the remaining 3 tacky tape sides and bottom.

5. Make sure Fabric is evenly tacked down and smooth. If you need to re-position, gently pull up and re-tack.

6. Beautiful, easy way to display Fabric graphics without the hassle of "perfect sizing" and then silicone edged keders/beads to insert into a frame. Stays flat, won't get "stretched" by people poking on it, because ours is not "floating" in the frame, it's on a backer. Easily changed out and very forgiving on sizing, unlike keder/beaded edged Fabrics.

For indoor or outdoor use. Tacky tape is removable and reusable, waterproof.
